

Green Kazakhstan

Naryn...Naryn...Naryn sands. The land of my ancestors. It is situated in the West of Kazakhstan. I came from those places and I breathed fresh air. I saw beautiful nature, old pinery which was planted By Zhangir Khan, the last Khan of Kazakh people. He protected ecology. Exactly, he wanted the sands do not wander. This fact took place in the 19th century.

Just now I live near the town of Nur-Sultan. My parents moved from Naryn, because they wanted me to get a good education, to find a decent in the future. Just I live near the town of Nur-Sultan. The village is surrounded by steppes, wheat fields and forest belt. It is picturesque scenery. I like my village. But I don't like going to city, why? Because there is a lot of smoke, soot. The houses are heated by coal. The air is gassed. There are so many cars. They drive on petrol and diesel. I don't like the city. I am stuffy there. there is much problem in our life. I am not a scientist, I am not a president, but if I were them, I would like to use the natural energy, new green technology, exactly, the energy of Sun, wind and water. Transition to a green economy means, careful economical attitude to natural recourses. I think first of all, we are to "green" our mind. Save the nature and ecology.

The "green economy" is a new direction in economic science, an economy that leads to an increase in human well-being and to a significant improvement in the environment, reducing the shortage of natural resources. At the heart of the green economy are clean or green technologies that provide a wide range of competitive goods and services while addressing global environmental challenges.

I am 6th grade pupil at secondary school №42 of Nur-Sultan. Every month our school organizes "Month of Ecology". On this event we collect waste papers and give them to specialists. Our English teacher G. Nassirovna often says that every person should save energy. And she always checks classroom and turns off the light. I and my classmates take a pattern from her. I think that great achievement begins with small things.

In future I'll do my best for my country's development. I want to plant coniferous and saxaul forests, expanding the green belt around the capital; it can help to restore our nature and ecology.

Let us not forget the ancient Native American saying "We don't inherit the Earth from our ancestors, we borrow it from our children".
